

Experiment No 09

- Roll No : 25143071

- Program :

```
• #Single Inheritance
• # Base class
• class Parent:
•     def func1(self):
•         print("This function is in parent class.")
•
• # Derived class
• class Child(Parent):
•     def func2(self):
•         print("This function is in child class.")
•
• # Driver code
• obj = Child()
• obj.func1()
• obj.func2()
```

```
#Multiple Inheritance in Python
```

```
# Base class 1
```

```
class Mother:
    mothername = ""

    def mother(self):
        print(self.mothername)
```

```
# Base class 2
```

```
class Father:
    fathername = ""

    def father(self):
        print(self.fathername)
```

```
# Derived class
```

```
class Daughter(Mother, Father):
    def parents(self):
        print("Father :", self.fathername)
        print("Mother :", self.mothername)
```

```
s1 = Daughter()
s1.fathername = "Shahaji"
s1.mothername = "Suvarna"
s1.parents()
```

- **Output :**

 C:\Windows\System32\cmd.exe

```
